

# Pole Grounding Provisions

## Steel Poles:

Each steel pole comes with a grounding provision located inside the handhole. Our steel poles come with either a 1/2" CapScrew and 1/2" Nut or a 1/2" - 13NC tapped lug to attach the electrical ground wire to the pole.

## Aluminum Poles:

Each aluminum pole comes with a grounding provision located inside the handhole. Our aluminum poles come with either a 1/4", 3/8" or 1/2" tapped lug depending on the pole size. This tapped lug should be used to attach the electrical ground wire to the pole.

## Festoon Provision:

A festoon is available on all our poles. The festoon comes without the electrical components, but have the clips in place to attach the appropriate outlet and cover to the pole.
